Profile

I am a Data Mining Analyst with over 5 years of experience in the field. I have worked extensively with data mining software and techniques, and have gained a deep understanding of how to effectively use these tools to extract valuable insights from data sets. My skills include both qualitative and quantitative analysis, as well as strong communication abilities which allow me to clearly explain my findings to clients or stakeholders. I am also highly proficient in Excel, SQL, and Tableau; three essential platforms for any Data Mining Analyst. In my previous roles, I have successfully led projects that involved complex data sets and required innovative thinking to solve difficult problems. My goal is always to find the hidden patterns within data that can be used to improve business outcomes or drive decision making.

Employment History

Data Mining Analyst at Hartford Steam Boiler Inspection and Insurance Company, CT

May 2022 - Present

- Successfully completed data mining projects with over 90% accuracy.
- Able to work with various types of data and find patterns or relationships.
