Profile

I have over 5 years of experience working as a Network Analyst. In my previous role, I was responsible for designing, implementing and troubleshooting network systems. My experience has given me the skills to manage complex networks and identify issues quickly. I am also proficient in various networking software and tools.

Employment History

Network Analyst at CIS, PA

Jun 2022 - Present

- Led the implementation of a new network architecture for the company, resulting in increased efficiency and productivity.
- Implemented a VoIP system that saved the company \$X per year in phone costs.
- Negotiated with vendors to get better rates on networking equipment and services.
- Wrote custom scripts to automate various tasks related to network administration, saving X hours per week in manual labor.
- Created training materials and documentation for new staff members on how to use and troubleshoot the network infrastructure.
- Responded quickly to incidents and provided resolutions within agreed upon SLAs.

Network Engineer at Lockheed Martin, PA

Sep 2017 - Apr 2022

- Successfully installed and configured a new network for the company which resulted in increased productivity.
- Successfully implemented a VoIP system for the company which resulted in decreased phone costs.
- Successfully designed and implemented a VPN solution for the company which allowed remote employees to connect to the network securely.
- Successfully upgraded the firmware on all routers and switches, resulting in increased stability of the network.
- Created comprehensive documentation of current networks which assisted with troubleshooting issues more efficiently.
- Trained junior staff members on networking concepts and best practices.
