

Deylin Sleister

Network Security Analyst

Profile

I have over 5 years of experience working as a Network Security Analyst. In my current role, I am responsible for managing the network security for a large organization. I have experience with firewall configuration, intrusion detection/prevention systems, and vulnerability management. I am also familiar with various compliance standards (e.g., PCI DSS, HIPAA). My analytical skills and attention to detail allow me to identify potential security risks and take steps to mitigate them. In addition, I have strong communication skills that enable me to effectively collaborate with other members of the IT team and report findings to senior leadership.

Employment History

Network Security Analyst at Symantec, NE

Mar 2022 - Present

- Led the development of a new network security protocol that increased system safety by 45%.
- Coordinated with 3rd party vendors to patch 50 systems in response to CVE-2018-1234.
- Implemented a log analysis solution that reduced mean time to detect (MTTD) from 12 hours to 2 hours.
- Wrote custom IDS signatures that identified and stopped 10 zero-day attacks.
- Created comprehensive documentation for all company network security procedures.
- Trained 5 junior analysts in best practices for networking safety protocols.

Network Security Associate at McAfee, NE

Sep 2017 - Feb 2022

- Successfully installed and configured new software for the company network, increasing security by 50%.
- Successfully identified and resolved various networking issues, saving the company an estimated \$5,000 in repairs.
- Created comprehensive documentation of the company's current network setup and specifications.
- Implemented a series of security protocols that increased overall safety for sensitive data by 75%.
- Worked with team to develop disaster recovery plan in case of major system breach or attack – successfully prevented 2 attacks from causing any damage.
- Regularly performed audits on systems and networks to identify potential vulnerabilities before they could be exploited.
